Dentos

Chicago

College Of Dental Surgery
of Loyola University, Chicago, Illinois

Seventy four years have passed since the founding of the Chicago College of Dental Surgery, Loyola University. These have been years of progressive development in our profession. The college has offered to its students, through the years, the best in the field of dental education. The Dental School has the full approval of the Council of Dental Education of the American Dental Association.

The faculty and the student body of this famous institution are composed of men and women whose accomplishments place them on the highest plane among the leaders in the development of the field of Dentistry. Our years of progress have been many and varied. They constitute an effort which has made our school one of the finest in the world. To the many efforts and contributions of these people, we, the students of the Chicago College of Dental Surgery, present and dedicate the DENTOS '57.

Students	41-73
Activities	75-103

Introduction

This is the first yearbook to be published at the Chicago College of Dental Surgery during the past fourteen years. With many regrets it will probably be the last since the University as a whole will publish their own book which will cover all of the various schools from now on. Therefore, let us all look upon our book as a lasting memoir to our school.

Within the next one hundred or so pages we have tried our best to reproduce the year, 1957. The people and events that are involved have been put in their appropriate places. To begin our journey back over the year 1957 we have selected what we would like to call "Spectacular" photographs and are presenting them on the next nine pages. Each picture is supposed to depict some phase of the past year. You must realize that we had to limit ourselves to the selection of these pictures. Every event could not be covered — if they were, the book would then require twice as many pages and twice as much money.

Therefore, within the book, you will find yourself in September at the beginning of the school year. You will advance through the year and attend the parties, you will become engaged in all of the school activities. You will be involved in class functions, fraternity functions, and scholastic functions. You will be taking National Boards, practicals, and final exams. You will meet your fellow classmate, your fraternity brother, and your faculty and staff. You will travel from the Christmas cafeteria and Hanko's in the basement

at 1757 to the Post-graduate office and Mr. Blickenstaff's office on the fifth floor. You will encounter every dental department the school has to offer. The DENTOS will take you to these places.

But wait what is "DENTOS"? We know it is the yearbook and has been so for a great many years. But what does the name imply? This seems like the best place as any to explain its meaning and derivation. The word "DENTOS" actually is a combination of two words and has a double derivation. The first portion of the word "DENT" is taken from the Latin term "dente" meaning tooth. The latter portion "OS" is from the Greek language. Its meaning is "pertaining to." As a result, through a slight stretch of the imagination one can arrive at the definition of "DENTOS" as "pertaining to the teeth." Our early fore-fathers derived this name, and therefore, out of due respect for them, we have maintained its rightful place as the name of our book.

It should also be made known here that many people have worked hard and long to gather all the data necessary to put forth this publication. They worked hard because they wanted a decent yearbook, for this we are appreciative.

So now an introduction has been made. Turn the pages and look for those things which you remember most, those people which you find yourself involved with everyday. We hope that you enjoy yourself and also we hope that you enjoy the book. This then is the "DENTOS '57."

And those first days of the
classic we are bursting with
eagerness and anticipation.

And so we tried our best to
relax — Halloween.

The first Class III — and
on a lower incisor,
no less.

Seems as though the coffee is now being brewed in the Sophomore lab.

Point Posting — Did I or did I
not make it?

Student A.D.A. Clinic Day — You
see, Doctor, it's this way . . .

Honors Banquet — And we were so rewarded!

Final Exams -- And so we tried to succeed.

Graduation — and now I am a real Doctor!

A New Dean

With the leaving of Dean Barault for the Dental School in Puerto Rico, the school board of trustees appointed Dr. Gustav Rapp, Professor of Chemistry and Physiology, to the post of Acting Dean until that time a new full-time dean could take over the helm.

Dr. William P. Schoen, Professor of Dental Materials, was given that job. He, along with Dr. Rapp, faced a big problem. To follow in the steps of an able leader was one thing, but to make the transformation without producing confusion or creating many complications seemed to be the big problem at hand. Through fore-sight, these men determined that one man alone could not do the job. Therefore, Dr. Rapp remained at his post as Acting Dean, and assisted Dean Schoen until it seemed that this problem was completely overcome.

With the aid of Dr. Frank Armature, Secretary to the Faculty, Dean Schoen and Acting Dean Rapp presided through the

year unerringly. They proved not only to themselves, but to the faculty and the student body as well, that they were capable leaders in every aspect of the word.

These men immediately began searching the school building for more room to expand and for more improvements that could be made.

Harmony seemed to be their motto for this is how they worked together. Day by day, new ideas were brought forth and discussed. Improvements such as new units and equipment began to take form. Red tape, a big problem in any institution, has appeared to be on the downgrade.

Enthusiasm and progressiveness are their chief attributes. Attributes so contagious that they have spread throughout the school at an ever increasing rate. New life has sprung up and a new, more progressive era has begun at the Chicago College of Dental Surgery.

Dean Schoen and Acting Dean Rapp discussing one of the many problems which confronts them.

What can I be charging you for?

What's missing here?

I stand alone!

The "Do It Yourself" gang!

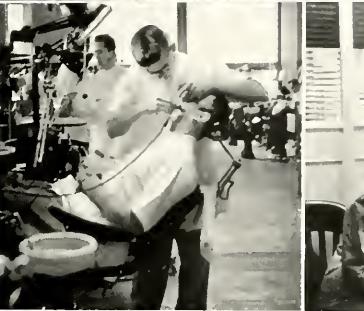

Sure is crowded in here!

Well, what's this here?

How can I answer with your fingers
in my mouth?

That light does wonders for you!!

Knights of the Round Table.

Mary, please say "Yes"!!

2041 points and 2021 in fines, that
leaves me 20.

Faculty

Dr. Byron May
Instructor of Radiology

Mr. John Blickenstaff
Director of Visual Aids

Dr. Frank Lindner
Instructor of Ceramics

Ceramics

Esthetics is a very important phase of modern dentistry. The art of Ceramics has made it possible to restore the beauty of a person's fractured anterior tooth. It is a difficult venture and it takes years of experience to master this art of restoring mother nature's work. Men devoted to this field of dentistry provide a psychological uplift for today's handsome young person whose teeth have met with accident or decay. A great service is rendered to the patient in this field of dentistry and the patients satisfaction is shown by a beautiful smile of confidence.

Anatomy and Histology

The study of the human has been encountered ever since the recording of history initiated. As the years passed on, interest has increased in the great universities of today to investigating its hidden secrets. Human anatomy is taught in a manner as to show how the Almighty created minute cells to form organs which work in harmony to make the body function as a whole. With this thought in mind the normal physiology of the human body is studied so that the abnormal may be detected and healed for a happier and healthier life.

Dr. Harry Sicher
Professor, Anatomy and Histology

Dr. John O'Malley, Instructor

Dr. Arno Leshin, Instructor

Dr. Nichelas Brescia, Instructor

Dr. Kenneth Nowlan, Instructor

Dr. Nichelas Brescia, Instructor

Dr. Marshall Simulson, Instructor

Anestheiology

The aim of dentistry is twofold in as much as it stresses to prolong life and to eliminate pain. In our day and age, science has discovered many sources of preventing pain for a patient's comfort. Much of our modern surgery could not be performed without the science of anesthesia. The patient of today need not fear pain of a dentist's drill or forceps.

Dr. Frank Grem
Associate Professor of Anesthesiology

Chemistry and Physiology

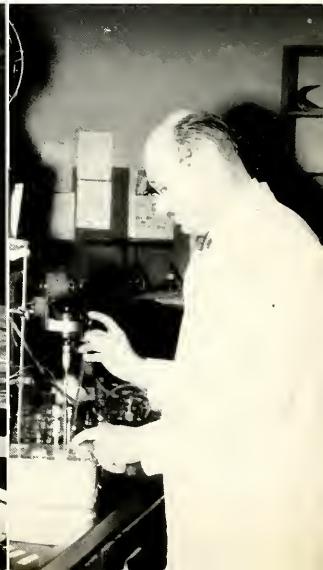

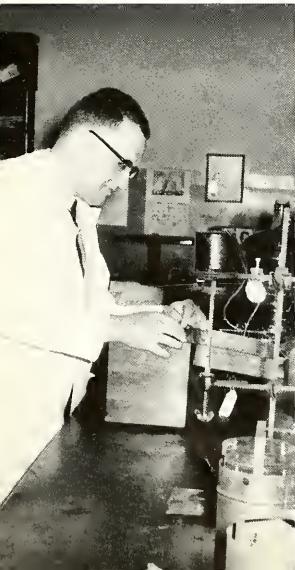

This field of dentistry deals with the chemicals of our tissue which make them physiologically possible to function. The basic materials of the living cells and their function are studied here. A great realization is acquired in this scientific field

which is that there is a great difference between a mass of chemicals and a living cell. The spiritual significance can never be disregarded in the study of science.

Dr. Vincent Sawinski
Instructor

Dr. Gustav Rapp, *Professor, Chemistry and Physiology*

Mr. F. B. Gurney, *Instructor*

Fixed Prosthesis

Many unfortunate patients have suffered the loss of one or several of their teeth. This field of dentistry, with its soundness and precision, has made it possible to restore the lost member or members as close to the original plan of mother nature as possible. Much research has been carried on in recent years to approach as accurate method and means of constituting an appliance which is compatible with the natural tissues and the patient in general.

Dr. George Matousck

Associate Professor

Chairman, Fixed Prosthetics

Dr. Peter Christensen, *Instructor*

Dr. John Allison, *Instructor*

Dr. Wilbur Dolezal, *Instructor*

Dr. Russell Burgess, *Instructor*

Dr. Joseph Cantaio, *Instructor*

Dental History

Every man wonders about the beginning of dentistry and its courses through history. As a result, it is taught in dental school so the student may appreciate the profession and what the forefathers had to tolerate so that the public would learn to respect the dentist and have confidence in this branch of the Healing Arts. It is a fact that people in the times before Christ confronted problems of dental disease the same as they are encountered today. Their methods of stopping these diseases were crude, but they were trying to do something about it. In years to come our methods may seem crude to the profession, but will be respected as we respect our ancestors for trying their best to improve dentistry.

Dr. Shaifer Peterson, *Guest Lecturer, Dental History*

Dr. Russell Burgess, *Instructor*
Dr. William Schoen, *Professor,*
Dental Materials
Dr. Phillip Schoen, *Instructor*

Dental Materials

The art and science of dentistry in the treatment of oral diseases is only as good as the accuracy of the materials used to correct the pathology. Much science and research have gone into the development and processing of these materials to meet the fine qualities as required of good dentistry. As in any material, the results of their work is only as good as the operator using them. Without research working hard to develop these materials, dentistry would not be as accurate as it is today.

Dr. Joseph Restanski
Associate Professor
Endodontics

Endodontia

This field of dentistry is a speciality dedicated to the study of the dental pulp. Due to advanced dental caries or some unknown reason the tissue within the tooth may die. Within our century, there was a time when such a tooth contracting this pulpitis would have to be extracted. As a result, many men dedicated much time and effort in treating these teeth to save them. From this it was discovered that a non-vital tooth could survive and function for many years by removing necrotic tissue under sterile conditions. As a result, many anterior teeth have been saved and the pathology which involved them soon disappeared. This field is growing more with each year. With concentrated research much more will be learned about the pulp and the diseases which it encounters.

Dr. Marshall Smithson, *Instructor*

Dr. E. James Best, *Instructor*

Operative Dentistry

Dr. Paul Dawson, *Professor of Operative Dentistry*

Dental decay is one of the leading diseases of the world in our present day. Ninety-five percent of the world's population is stricken by it. By means of modern radiographs and modern operative equipment, dental decay can be detected and cured if done so early enough. Modern electrical equipment can remove the decayed portion; a medication can disinfect

the tooth; and, a material similar to the lost portion of the tooth can be inserted, and thus, the tooth can be returned to its normal function. As of yet, man knows of no way to prevent dental decay, but with good operative dentistry, he can arrest starting decay and save for the patient any discomfort in the oral cavity.

Dr. Thomas Russell, *Instructor*

Dr. John Coady, *Instructor*

Dr. Roll Gumber, *Instructor*

Dr. James Ridlen, *Instructor*

Dr. James Cadwell, *Instructor*

Dr. James Cadwell, *Instructor*

Dr. Alfred Harris, *Instructor*

Dr. Russell Burgess, *Instructor*

Dr. Mitchell Kaminski, *Instructor*

Dr. Marshall Smulson, *Instructor*

Dr. Richard Handshu
Assistant Professor
Oral Diagnosis

Oral Diagnosis

This department of dentistry deals with the finding of oral and dental disease and the presenting of a procedure to correcting the disease. The patient can gain a great deal through his own cooperation, the sound knowledge of the operator, and accurate diagnostic laboratory aids. Many factors must be taken into consideration in these three divisions of diagnosis in order to render the patient the best service possible. A good diagnosis is a good service and leads to a good prognosis and confidence of the patient.

Oral Pathology

This field of dentistry deals with the diseases of the oral cavity. Much time must be put into the study of the normal conditions of the oral cavity before this field can actually be dwelt upon. Many diseases of the entire body can be detected in the oral cavity many times before the symptoms appear anywhere else in the body. These diseases are numerous, and therefore, the pathologist must be careful in detecting the proper one with the aid of the patient and the general practitioner.

Dr. John O'Malley, *Instructor*

Dr. Patrick Toto, *Associate Professor*
Oral Diagnosis and Oral Pathology

Dr. Joseph Kostrubala
Professor
Oral Surgery

Oral Surgery

Many unfortunate people suffer the loss of one or more of their natural teeth. It is a regret that this must happen but modern science has made this field as safe and as painless as possible. There are many good anesthetics to choose from today to alleviate any pain at the time of extraction. Infection can be arrested by the use of antibiotics. Patients cooperation, the surgeon's skill, a scientific medication have all made the extraction of a tooth a fearless operation for the patient to undergo.

Dr. Cedric Dittmer, *Associate Professor*
Oral Surgery

Dr. Nicholas Choukas, *Instructor*

Carolyn Wilson, *Surgery Nurse*
Dr. John Lavieri, *Instructor*

Dr. Viggo Sorenson, *Assistant Professor*
Oral Surgery

Dr. Raoul Valls, *Instructor*,
Dr. John Giannini, *Instructor*

Dr. Frank Lucatorto, *Instructor*

Dr. Thomas Grisamore, *Associate Professor, Bacteriology and Pathology*

Thomas Linnik, *Laboratory Assistant*

A field of dentistry with great personal satisfaction. A patient with mal-positioned teeth presents himself to the orthodontist and both must realize that there is a long road of hard work ahead to a beautiful smile. There is a great psychological uplift to the individual who can face the world and smile again without showing mal-positioned teeth or distorted facial contour. Time will show the progress, installing in the patient a look of confidence and also, a feeling of self-satisfaction in the orthodontist.

Bacteriology

With the progress of time and science, it was soon discovered that micro-organisms play a big part in the decay of natural dentition. As a result, a dentist's knowledge of such micro-organisms must be complete. He must be able to determine the amount of micro-organisms present in the oral cavity of an individual and the effects that they will have upon this individual's dentition. From this he can accurately program his plan of operation in order to prevent further decay. Also, through his knowledge of immunology, he will be able to arrest the growth and spread of these micro-organisms.

Dr. S. Signorino, *Instructor*

Dr. Joseph Jarabak,

Professor, Orthodontics

Orthodontia

Dr. J. Janz, *Instructor*

Dr. B. Powers, *Instructor*

Dr. G. Carter, *Instructor*

Dr. T. Solinski, *Instructor*

Pedodontia

Children's dentistry is the foundation of securing the permanent dentition by caring for the deciduous teeth. These baby teeth maintain the space for the permanent teeth upon their eruption. They, along with the musculature, also maintain the facial contour of the child. Many dentists will shy away from the child and do so wrongly. Children must have dental care, and with a little psychology used on the patient this task can be made quite easy. A child exposed to the right dental atmosphere will have a better chance to enjoy dental health throughout adulthood.

Dr. Maria Funkunas, *Instructor*
Dr. Theodore Ferguson, *Professor,*
Pedodontics

Dr. William Burch, *Instructor*

Dr. Joseph Discipio, *Instructor*

Prosthetic Dentistry

This is a field of dentistry dedicated to the replacing of the lost members and lost tissue of the dental arches. Many people suffer the loss of their natural dentition and can be thankful to the prosthodontist by the service he renders to them through his denture work. In this phase of dentistry, so much good can be done for a patient, psychologically, yet it does require cooperation on the part of the patient. They must realize these dentures are artificial appliances, and must be used and accepted as such. A great deal of self-satisfaction can be gained from a very satisfied denture patient who can enjoy dining and smiling once again.

Dr. Arthur Kroll, *Assistant Professor and Chairman, Prosthetics Dentistry*

Dr. Robert Hattendorf
*Assistant Professor
Prosthetic Dentistry*

Dr. John O'Connell
*Assistant Professor
Prosthetic Dentistry*

Dr. Thaddeus Restarski

Dr. Louis Alonzi
Instructor

Dr. Mallory
Instructor

Dr. Arthur Kroll
Chairman Prosthetic Dentistry

Dr. Rinert Gerhard
*Assistant Professor
Prosthetic Dentistry*

Periodontia

Many people are under the false concept that extraction of teeth is only due to dental caries. However, more teeth are lost during the present age due to diseases of the supporting tissues of the teeth than those lost due to dental caries. Periodontia is that field of dentistry dedicated to prevention and cure of the diseases of the supporting tissues surrounding the teeth. This field of dentistry may take credit for the salvation of many teeth, for the arrest gingival recession, and bone resorption. Much dexterity is required to do a good service in the surgery involved. Many patients are happier today because of the periodontist's ability to enable these people to maintain their natural dentition.

Students

The Class of 1957

The last week in September marked the beginning of the end for the Senior Class. We had at last arrived, and are now seniors. Eight months and eight foils from now we would graduate. It seemed as though we could never put in a foil and an inlay in one day.

Shortly after the year began we selected Harold "Red" Brandlein to lead us through the hectic year. His able assistants were George Welk, Vice-president, Jerry Chyrek, Treasurer, and Phil Kamish, Secretary.

It didn't take long before we became accustomed to the cry of "Meeting" on Tuesday mornings. Red was always able to find a reason to hold a meeting. However, we were soon to realize that this was his method of cementing a top notch class together.

Before we realized it, the first practical was upon us. An inlay and an amalgam in one day? Yes, that is what we did and we took it in stride. Now we began to think that we could make it through the year.

To relax, we had a party at the Delt House and all who attended surely had a ball. Pete Katafias walked off with the door prize.

During the first week in December, Bob Goepf started to assemble his cast for the Christmas play. Assembling the class was easier than getting the production rehearsed and on stage. By the time the show was a day away, we had completed our first and only real rehearsal. It proved to be all that was needed, for when the curtain opened on the "Class of '57" we all performed admirably and had a great time.

No sooner had we returned from the Christmas vacation and recovered from the New Year's hangover, we found our next obstacle in the road to graduation. This time it was a foil and an amalgam. With two practicals down and one to go we started to suck in our stomachs and lift our chins. We were over the hump and on the way out. The next hurdle was the National Board. With the help of George

Class Officers: Vice-president, George Welk; President, Harold Brandlein; Secretary, Phil Kamish; and Treasurer, Jerry Chyrek.

Seniors and Faculty members present on the Eli Lily trip.

Welk and his committee, we all had a complete set of board questions from previous years. With that help and a few hours of cramming we took the boards. Some of them took us, but on the whole we did a good job of showing what we had learned in the past three years.

It was now time for a vacation. And what a vacation, three whole days at the courtesy of the Eli Lily Company in Indianapolis. The tenth floor of the Sovereign Hotel was our base of operations, and the operations ranged from card games to song fests with "Squeeze Box" Weiner at the helm.

Our next big event was the ADA

Clinic Day and Honor's Day Banquet. Congratulations were in order for all who were honored and had a part in making the event one of the best in its history. For the second year in a row, the Senior Class chose Dr. Paul Dawson to receive the "The Golden Tooth" Award.

Now the time had come to tackle the big one, FOIL and INLAY. Tackle it we did, although some of us had to make more than one tackle we eventually had the situation well in hand. Now the year is over, and we are now waiting for that long walk to receive that sheep-skin with the three little letters, D.D.S.

Candidates for the degree of Doctor
of Dental Surgery.

Four years hard work for
this special day.

Congratulations, Doctor!

Exit, Doctors of Dental Surgery.

The Class of 1958

After finishing the sophomore year, we all agreed that a years vacation would be needed to recuperate from the strenuous ordeal which we had just finished. However, to our dismay, we found ourselves on June 13 in the clinic. The temperature or heat was rather stifling as we all crowded into the Diagnosis Room, even Bill Soya.

After obtaining our first patient, we assumed that we know everything there was to know about dentistry. That is until Audrey Conlin took us by the ear in the Asepsis Room and kindly informed us that we didn't even know how to read. However, after a few remedial lessons, we learned the English language. And of course,

according to some we were only novices.

As always election time approached, and it seemed that all our officers were well chosen. The victors were: Harper Jones, President, Bill Holohan, Vice-President, Mike Churosh, Secretary, Bob Flynn, Treasurer, and Pete Maniatis, Student Council Representative.

It soon became apparent that the Junior year was going to be a struggle for points. By the time most of us deciphered the routine the year was almost over. The cries of anguish were to be heard at any time on the clinic floors as work progressed the wrong way. We realize now that time is that which there ain't enough of.

Left to Right: Harper Jones, Robert Flynn, Michael Churosh, William Holohan.

Left to Right: F. Watkins, J. Thorpe,
D. Fleming, J. Foolson, W. Kagiannis,

The Class of 1959

The class of '59, may it work, play, and prosper in the future as it has in the past. The past; it is well worth reviewing perhaps just what that past represents. Our first year, although that does seem to be a terribly remote period, was filled with the trials and tribulations confronting any "stranger in a strange land." These were overcome with a doggedness and perseverance which have placed their stamp upon our class as one of the best in scholarship as well as in fellowship.

The officers for our first two years were elected at the end of our first semester, freshman year. Sam Liaros served well as president. John Ballack's efficiency as "veep" was surprising. Joe McLaughlin was a faithful treasurer. Guy McGarry did

well with his pen.

Our second year began auspiciously with the return of the boys, enthusiastic, eager for the resumption of the work and determined to make this a banner year in history. Several class meetings assured us the title "Rebels Without Cause."

Except for one social and those provided by the several fraternities, the year closed devoid of activities. In comparison to this dearth of social functions, our class work was of a high quality, proving the time well spent.

As our first year set a high standard, so our second year has maintained it. Our third year we hope will advance us to the unique position of the best class in the history of the school.

The Class of 1960

Amid cries of "We made it!", the class of 1960 began its journey into the field of dentistry. Being no more than neophytes, not knowing anything more than the ordinary laymen, we eagerly plunged into the tedious and exciting work and study presented in the curriculum of the school. Throughout the first semester we were still unsure of ourselves and thus, took our first final exams with much worry and a lot of studying.

During the second semester, with the first one already under our belts, we began to take things in stride, not letting up on our studies at all but being more confident of our work. We were subjected to many things new to us in the field of dentistry and were very much impressed by them.

It was during the second semester that we finally elected our class officers and

began to function in unity. Jack Battistone was elected president and was ably assisted by vice-president Charles Cooper, treasurer Richard Natile, and secretary, Byron Biscoe. The freshman representative at student council meetings was Al McManama.

Not everything was all work and study throughout the year. During the first semester we were all invited to the various smokers sponsored by the fraternities and everyone enjoyed themselves. We also participated in the all school Christmas play and presented a skit directed ably by Pete Wall.

The culmination of the year was celebrated by a picnic out in Skokie, at which time, farewells and shouts of "See you next year!" were heard throughout the day. We were all anxious to return for our sophomore year.

Activities

Costanza and Rev. F. A. Vaughan.

St. Apollinian Guild

The school year of 1956-1957 was perhaps one of the most successful in the history of Alpha Chapter of St. Apollonia Guild. Under the able and enthusiastic leadership of Adrian Costanza, aided by a capable set of officers, the Guild sponsored activities that added much to the social, intellectual and religious life of the members. At the monthly meetings the members profited from talks on hypnotism, false advertising in dental supplies, child psychology, and special film on child birth. The Sports Day and the yearly Communion Breakfast were well attended.

Culminating the years activity, certificates were awarded to all the Senior members of the Guild, and St. Apollonia Guild Keys were presented to Senior members who had served at some time or other as cabinet officers. This is the first time since the Guild's inauguration that keys were awarded to qualifying members.

Student A. D. A.

Without a doubt, one of the strongest student organizations at the Chicago College of Dental Surgery is the Student A.D.A. Its relations to the student is similar to that of a union to laborer. Based upon its senior, the American Dental Association, the Student A.D.A. strives to maintain a working balance between the student and the faculty as the American Dental Association strives to maintain a working balance between the dentist and the public.

The Student American Dental Association had its most gratifying year culminating in the A.D.A. Clinic Day in which every class gave a tremendous representation of outstanding clinics by their top men. For the seventh year in a row, the Student American Dental Association can claim one hundred percent student membership. The organization's prime function to stimulate and bring to the students additional interest and information in dentistry on a professional basis was put to work at their first meeting at which time, Dr. Harry Sicher presented a lecture on the "Temporal-Mandibular Articulation." Other programs presented during the year covered many fields of dentistry. One such program consisted of a demonstration on Rubber Base and its associated materials presented by Mr. Fine of Kerr Company.

The Honor's Day Banquet was held on the evening of April 10, 1957. This banquet is always the terminating point of the Clinic Day. Top clinics and essayists received their awards and prizes. Highlights of the evening were the presentations of Departmental Awards, Student Activity Awards, and the Honorary Student Award for the year to the outstanding students.

Officers for this jubilant year were Thomas Wright, President, Glen Weinberg, Vice-President, Phil Kamish, Treasurer, and Tom Thanasauras, Secretary.

Jack Akamine, Jim Brown, Barbara Wright, Tom Wright, Dr. Richard Stamm, Glenn Weinberg — Dinner Meeting of the officers.

demonstration.

Student A. D. A. Activities

Student A.D.A. Clinic Day Essayists:
R. Acevedo, R. Hoder, W. McNabb,
J. Duffy, J. Bach, L. Mazuchelli.

Clinic: Types of Articulators, Facebows, and Determination of Exact Center of the Mandible; George Takahashi and Karl Nishimura.

Clinic: Gingival Reconstruction; Glenn Weinberg and Lawrence Chase.

Student A. D. A. Clinic Day

Clinic: Rubber Base Compound; John Modestow and Derwood Janssen.

Clinic: Differential Diagnosis between Normal and Pathological Alveolar Crests; Daniel Miyasaki, Steve Asahino, and Charles Reeve.

Student A. D. A. Honor's Banquet

Dr. Earl P. Boulger addressing the faculty and student body.

Dr. Arthur Kroll accepting his membership into the Omicron Kappa Upsilon Honor Fraternity.

The "Golden Mike" Award presented to Dr. Nicholas Brescia as the year's outstanding pre-clinical instructor.

The "Golden Tooth" Award presented to Dr. Paul Dawson as the year's outstanding clinical instructor.

Valedictorian: Raoul Acevedo and
Salutorian: Thomas Powell.

W. Westerhoff receiving the Prosthetic Award from Dr. A. Kroll.

J. Murphy receiving the C. N. Johnson Memorial Award for outstanding character, scholarship, proficiency in operative dentistry.

Dean Schoen's Secretary receiving a citation for her capable assistance and cooperation

Phil Kamish receiving Alpha Sigma Nu Award from the very Reverend James F. Maguire.

Karl Nishimura receiving the Anatomy Award from Dr. Harry Sicher.

Jerome Chyrek and Ronald Nierenberg receiving the American Academy for Children's Dentistry Award.

Dr. Richard Stamm presenting A.D.A. key to Chauncey Cross.

Student Council

The Student Council of the Dental School is an organization which has the function and the general supervision over student body activities. Its purpose is for development of a broader cultural, social and moral relationship and to accomplish a closer unity among the entire student body.

Along with these activities such as the presentation of a formal dance and the Christmas program; the Council acts as an intermediary between the students and faculty when such an occasion arises.

The Council has become an irreplaceable organization through which the betterment of the school and of the profession maintain the high standards of unparalleled heights.

Lawrence Chase, outgoing President handing gavel over to John Sachs, incoming President.

Alumni greeting each other and talking over old times.

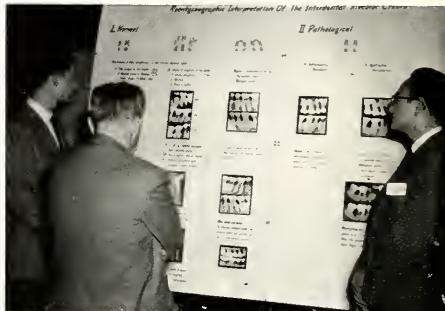

Homecoming

Homecoming — like any other school the Chicago College of Dental Surgery sponsors one day each year and pays homage to their alumni. And back they come, to the portals of their alma mater where they can gather and meet old friends and new friends alike. They enjoy the talks and conversations about the old days — and what a difference their is today. They will all agree that many changes have been made in the school. Even though many of the old dental units are still to be found, they all can see the gradual change taking place — department by department.

The fraternities connected with the college also join in the festivities by having small get-togethers at the fraternity houses. The alumni will usually drop in to the various houses after the day's activities and spend some time before they jaunt downtown to a banquet held in their honor.

However, all is not partying — for the students present for them many table clinics. Many times they probably have seen or heard about the material or technique being presented at the clinic. Yet, there are many clinics presented which are relatively new to the alumni. As a result, they usually find Homecoming an education in itself.

Various clinics being presented for the alumni.

F. Pacer, B. Pennino, Mrs. Pruitt, J. Sachs, D. Peara.

Intaglio

This year, 1957, is one of returning traditions at C.C.D.S. We have re-established the yearbook DENTOS and also the news magazine INTAGLIO.

To anyone in the dental profession, the word INTAGLIO means "an impression"; so, too, with our magazine. It contains the students' impressions or views of the people and events connected with the dental school. It is a student production, written exclusively by students.

News items are contributed by the correspondents of the various classes, fraternal organizations, and clubs. The editorial discusses an event interesting to all. An-

other feature, aimed at improving faculty-student relationship, salutes a professor or instructor. Of course, the most popular feature is a cartoon depicting, in satire, some phase of our education.

The Intaglio serves as the melting pot for school gossip. We, the editors and staff, receive our gratification from the chuckles of the students and faculty as they read the publication. Through the suggestions and contributions of our students we will strive to improve the INTAGLIO and give the readers an even more interesting magazine.

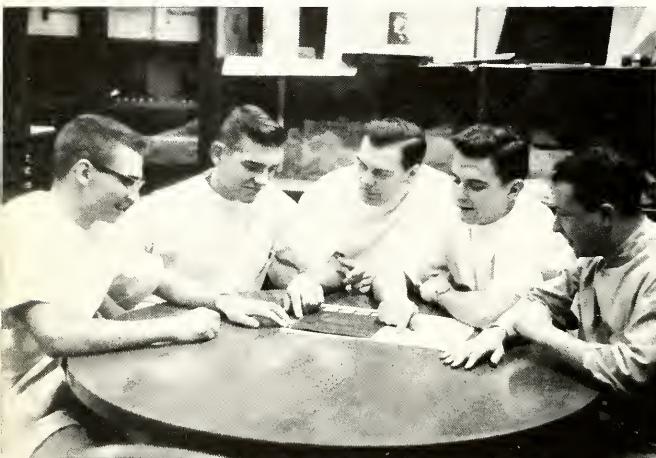

Dentos

Long out of existence, 1957 marked the return of the yearbook, DENTOS. Under the direction of Dr. R. Stamm, a nucleus was formed and plans and work begun. Robert Brandt was appointed Editor-in-chief, along with Leonard Weiss serving as Business Manager.

The yearbook staff eventually netted thirty members, all of whom were reliable and did their work well. Joseph Cerniglia and Derwood Janssen were appointed by Editor Brandt to head the Literary staff. Brandt also chose Karl Nishimura to be his Chief Photographer. As a result, through their hard and tedious labor, the DENTOS was able to be presented to the student body.

Tom Wiener and Tom Linnik selling subscription for the yearbook.

Blue Key

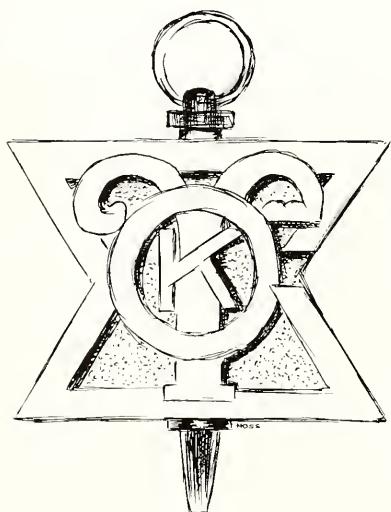

The Blue Key was founded at the University of Florida in 1924 and established at Loyola in 1926.

The organization has for its object the creation of the feeling of good fellowship among non-members. The Blue Key Honor Fraternity is not restricted to undergraduate students, but is open to the active graduate. In order to receive such honorary entrance to Blue Key the graduate must be active in mind and body. The requisites being the maintenance of good moral character and some contribution to the scientific advancement of the dental profession.

Members selected for the Blue Key in the past two years are as follows: Harold Brandlein, Lawrence Chase, Adrian Costanza, Frank Faber, Derwood Janssen, Phillip Kamish, Robert Laing, George Welk, William Holohan, Charles Hoffman, John Sachs, Corvin Stine, and Frank Watkins.

Omicron Kappa

Thirty two years have passed since the Chicago College of Dental Surgery awarded the first gold key of the Omicron Kappa Upsilon, and since that time several hundreds of graduating students have received this honor, the highest paid to an embryo dentist.

To be eligible for the Omicron Kappa Upsilon, the graduating student must have achieved a high scholastic standing, one which places him in the upper one twelfth of his class. His character and leadership must be of undisputable quality, and he must possess leadership ability.

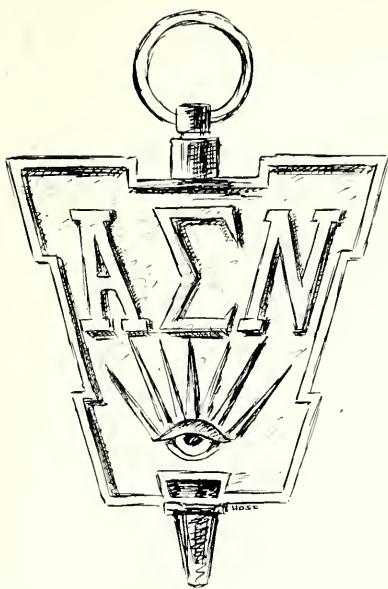

All is not lost to the man who graduates and does not receive this award, since the practitioner who "through excellence of professional attainment and citizenship

Alpha Sigma Nu

This distinguished Jesuit Honorary society was founded forty-two years ago, and in 1938 a chapter was established at Loyola University. Alpha Sigma Nu is now represented in the leading Catholic universities throughout the entire nation.

Excellence in scholastic ability, characteristics which are elevating to the intellectual and cultural attributes of his fellow students are determining factors for society members. He must be a person ready to contribute service and loyalty to his institution and promulgate harmony and understanding between faculty and students.

In the senior class this year, there were two such men with these attributes. They were Phillip Kamish and Warren Westerhoff.

Upsilon

and who has distinguished himself in his profession in his respective community," may have this honor conferred upon him.

Omicron Kappa Upsilon was founded at Northwestern University in 1914 by Drs. Thomas L. Gilmer, Arthur D. Black, and C.R.E. Koch. These men felt that a fraternal organization such as this was needed to stimulate "a spirit of emulation among students of dentistry and to recognize, in an appropriate manner, those who have distinguished themselves by high grades of scholarship.

Senior students receiving this honor for the past year are: Raul Acevedo, Joanna Baranovskis, Jerome Murphy, Thomas Powell, and Warren Westerhoff.

Alpha Omega

The common bond of Alpha Omegans is founded upon three cardinal principles — Fraternalism, Judaism, and Professionalism.

Fraternalism preaches friendship. The friendship which binds Alpha Omegans is one of benevolence and understanding.

In regard to Judaism, we are all members of a denomination which has always fought to retain its identity. Our numbers are few but our accomplishments are many, due to spirit of rightousness, justice, and love for our fellow man which we have injected into our work. For this reason, we are proud of our people and our heritage.

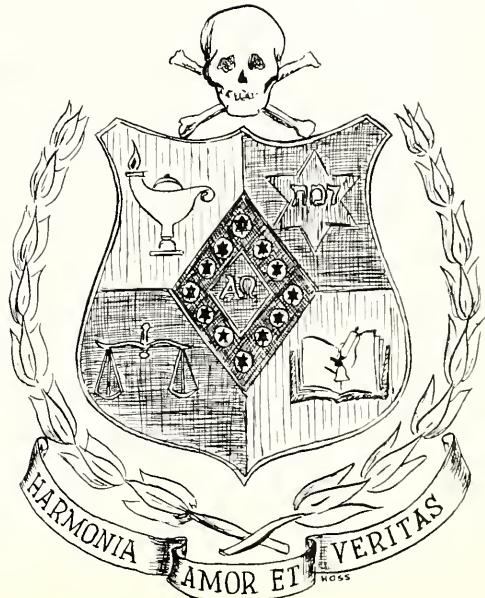

We are an important segment of the dignified healing arts and take our places proudly, among its honored ranks.

Alpha, the first, and beginning — Omega, the last, and end. To Alpha Omegans, these letters symbolize fraternalism from initiation to the end of life — from Alpha to Omega.

Leonard Weiss, Joseph Gordon

Frank Faber, outgoing Grand Master, handing gavel to Frank Banigan, incoming Grand Master.

Delta Sigma Delta

Incoming officers: R. Brandt, F. Banigan, A. McDonnell, S. Bell, W. Bercik, J. Snyder, E. Maier.

H. Brandlein, F. Faber, A. Costanza

Delta Sigma Delta is the oldest dental fraternity in existence. It was founded at the University of Michigan on November 15, 1882. Three years later, under the direction of L. L. Davis, Beta Chapter was founded at the Chicago College of Dental Surgery. The date was March 24, 1885. One of the men responsible for the organization of Beta Chapter was none other than G. V. Black.

Delta Sigma Delta can claim the honor of having Brother Delt's in charge of our Dental school right down the line to the present day. They were in order: Dean Brophy, Dean Johnson, Dean Logan, Dean McNulty, Dean Barault, and presently Dean Schoen. We are proud of this record and of these men that represent our school and fraternity. They all can stand high in their contribution to dentistry to make it the outstanding profession it is today.

The year 1956-1957 was a very enjoyable and successful year for Beta Chapter. The enthusiastic officers to help make such a year were Frank Faber, Grand Master; George Welk, Worthy Master; Frank Banigan, Treasurer; Frank Madro, Scribe; and Robert Goepf, Historian.

These men above proved that Delta Sigma Delta is one of the top professional fraternities. They showed that it was a fraternity that encourages and recognizes young men who do their best to learn dentistry. At the Student A.D.A. meeting last spring, Warren Westerhoff was given such an award for his unending interests in the field of dentistry.

A professional fraternity must teach its brothers to respect the profession and to work together to make it better. In order to work together, men must know one another better. The Delt's made this possible by having many social events

throughout the past year. Many successful parties were enjoyed by all such as the Halloween party, the Monte Carlo party, Christmas party, and St. Pat's party. Our special event of the year, the Spring Formal, was overwhelmingly enjoyed in the beautiful surroundings of the South Shore Country Club. All the beautiful girls and their handsome escorts added to the charm of the affair.

With spring also, came the formal initiation of the new members and officers. Those elected were Frank Banigan, Grand Master; Art McDonnell, Worthy Master; Robert Brandt, Scribe; Bill Bercik, Treasurer; and, Joe Cerniglia, Historian. Lots of luck to these men and the hope is that we can do as well in the future as we have done in the past.

Psi Omega

John McBee, outgoing Grand Master handing over the gavel to William Holohan, incoming Grand Master.

Outgoing officers: Top Row: Thomas Rogers, Bernard Penino, Peter Maniatis, Charles Reeve, Wallace Connell. Bottom Row: Jerome Murphy, John McBee, Robert Pfluger.

Incoming officers: Top Row: Charles Reeve, Robert Pfluger, Bernard Penino, G. Ewing, John Petrich. Bottom Row: Thomas Rogers, William Holohan, James Schram.

Psi Omega fraternity was established in Baltimore, Maryland in 1892 at the Baltimore College of Dental Surgery. Since that time it has grown to dentistry's largest fraternity. It has over 26,000 living members. Kappa Chapter was formed at the Chicago College of Dental Surgery in 1896. Since then over a thousand active members have been graduated from this school.

Kappa Chapter is quite active at Loyola having a number of events during the course of the year. The fraternity annually has a Halloween, Christmas, and Valentine party. In addition several open house parties are held as well as the annual freshman pledge banquet. The two biggest parties of the year come in the spring when the annual "April in Paris" takes place followed by the Senior banquet in honor of the graduating Psi Omegans.

Dr. Russell Burgess is the Deputy Councilor of Kappa Chapter and has held this position since the retirement of Dr. Cedric Dittmer in 1955. The assistant

deputy is Dr. Ralph Mitchner.

The Grand Master of Kappa Chapter for the school year of 1957-58 is William Holohan. The junior master is Tom Rogers. The secretary is James Schram and the treasurer is Charles Reeve. Bernard Penino is the editor and Robert Pfluger is the pledge master.

The wives of the married members of Kappa Chapter have organized and formed a group called the Wives Club of Psi Omega. A number of chapters in the country also have clubs of this type. Their president is Emma Lichota, vice-president is Jan Karras, the secretary is Joanne Brown, and the treasurer is Louise Reeve.

Psi Omega has had its present fraternity house for a period of seven years. The house is located at 834 S. Ashland Avenue, just a short distance from the school.

Members of Psi Omega have received many awards for excellence in Dentistry at Loyola through the years. We feel that our fraternity is a contributor to the continued improvement of the school.

The year officially began with the installment of Dr. Byron May, chairman of the Department of Radiology, as Deputy Supreme President following the retirement of Dr. Walter Buchman.

In the early fall a crew of our stalwart athletes pulled in their sagging abdominal muscles long enough to participate in the annual St. Appolonia Sports Day at the Lake Shore Campus. The trophy shelf is sagging just a bit more from this trip.

The first big party of the year occurred at Halloween. Goblins, pirates, and even a couple of characters straight out of the Arabian Nights threatened to shake the house down as they "Danced All Night" to the music of our new Hi-Fi sound system.

Following a banner pledge banquet and a fine initiation, we were happy to

accept into our midst fifteen good Zips and true.

The big party of the second semester was, of course, St. Paddy's Day. It developed that all present seemed to claim ancestry from the "auld sod." Everyone joined in a rousing time in honor of the great patron of Ireland.

Another high spot of the year was the Annual Golf Tournament. A raft of prizes were given away to the two hundred guests.

As a climax to a year of outstanding events, the Annual Dinner Dance was held at the Midlothian Country Club as guests of Dr. Z. Krol. It was on that occasion that Tom Powell received the scholastic award and the outgoing officers were presented with guards for their pins in thanks for a job well done.

NEW BRILLIANT NATURAL BEAUTY... MADE "ALIVE" BY UNIVAC 3-DIMENSIONAL EFFECTS

UNIVAC®
L I F E L U C E N T P O R C E L A I N ™ A N T E R I O R S

Here at long last is an entirely new and radiant lifeluent porcelain of exquisite beauty . . . new glowing "aliveness" . . . new "living" colors and color dispersions. These have been integrated by advanced techniques and electronic processes, creating a natural 3-dimensional effect so brilliantly alive in the mouth that it is virtually impossible to distinguish them from vital teeth.

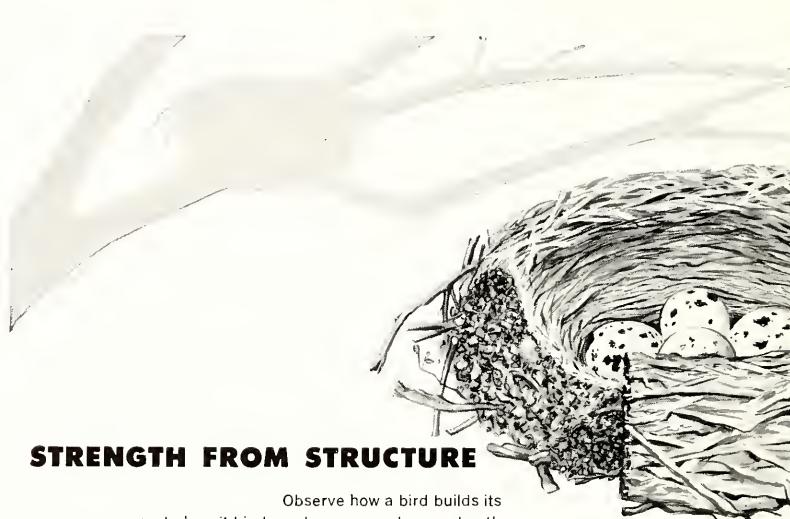

Univac Porcelain is not merely an improvement—it is truly a completely new achievement of tooth porcelain research and development.

Call your Universal Dealer for a demonstration. *Do* see Univac Anteriors . . . see their light-absorbing properties so precisely matched-in-depth to human teeth. You'll *insist* upon Univac . . . and only Univac . . . for your patients. * * *

**NEW UNIVAC DENSE PORCELAIN GRINDS SMOOTHLY AND
CAN BE POLISHED TO ITS ORIGINAL GLOSS AND FINISH.**

STRENGTH FROM STRUCTURE

Observe how a bird builds its nest—how it binds and weaves and cements—the instinctive use of structure to build strength.

Nature builds strong natural teeth with the same infinite care by developing a dense, homogenous internal structure . . . and man-made teeth must be fabricated from a material which has a similar internal structure in order to provide the maximum possible strength for the wearer of artificial dentures.

The vacuum fired porcelain of Trubyte Bioform Teeth approaches this natural perfection of structural material. The internal and external gases causing the voids and air bubbles in conventional porcelain have been substantially removed. A denser, more homogenous material results that allows grinding and polishing without risk of chipping or flaking.

CONVENTIONAL AIR FIRED PORCELAIN

TRUBYTE BIOFORM VACUUM FIRED PORCELAIN

Note in these two photomicrographs how the denser, more homogenous structure of vacuum fired porcelain is substantially free from the voids and bubbles found in conventional porcelain.

For greater strength and more beautiful esthetics for all your complete and partial denture requirements, specify the one and only Trubyte Bioform Vacuum Fired Porcelain Anteriors and Posteriors.

CRESIDENT DENTAL MFG. CO.

1839 S. Pulaski Road, Chicago 23, Illinois

The "wonder electric mortar and pestle" that helps you make better amalgam fillings faster is available in two models. The beautiful WHITE Bakelite housing for only \$60.50. Or the popular BLACK housing at \$55.50. Requires only 7 to 10 seconds to produce smooth, fine textured mixes with your preferred alloy! Saves time. Prevents waste. It will pay you to use a Wig-l-bug.

A FEW WORDS ABOUT . . .

COLUMBIA DENTOFORMS

From a humble start 37 years ago, Columbia Dentoforms have played an increasingly important role in dental education. Today, every dental student in the United States and Canada "cuts" his first teeth on Columbia Dentoforms, for we supply Dentoforms to every dental college in the United States and Canada, as well as many other lands.

In these 37 years, there have been

many improvements and additions to Dentoforms to meet the every more exacting demands of teachers. Today, Dentoforms number more than a thousand and present conditions that the student will encounter in practice. And in graduate years, Dentoforms continue to help clinicians in post-graduate education and to help the busy practitioner in his endless task of patient-education by showing the better dentistry he seeks to give.
